

VERMONT SNOW GUARD COMPANY FAQ'S

WHAT IS A SNOW GUARD?

A snow guard retention system is used to hold snow on a roof so it can melt off slowly or come off in pieces rather than in an avalanche. An avalanche of snow and ice can cause damage to: roofing material, gutters, leaders, landscaping and ornaments. Most importantly an avalanche of snow can harm people and pets below.

WHAT TYPES OF ROOFS CAN THEY BE INSTALLED ON?

Slate, Imitation Slate, Tile, Asphalt Shingles and Wood Roofs.

WILL THEY RUST OR STAIN MY ROOF?

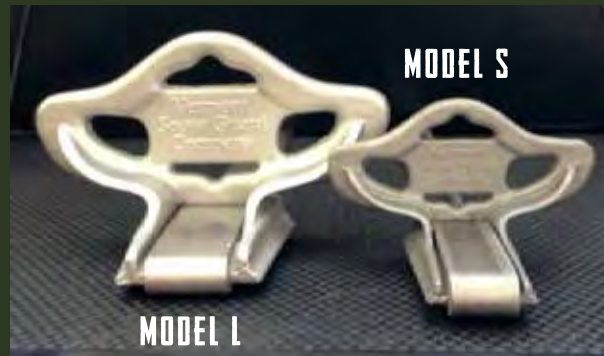

No, our products are non-corrosive.

HOW MANY SNOW GUARDS DO I NEED?

Generally, snow guards should be installed to 25% of the roof surface. Vermont Snow Guard Company will provide custom layout design based on your specific climate conditions, pitch of roof, length of roof and your aesthetic expectations.

We offer two models of snow guards. The Model L & Model S. Both in either cast bronze or cast aluminum. To view a spec. sheet visit our website at: www.vermontsnowguardcompany.com

DEVELOPED WITH OVER 30 YEARS
OF SLATE ROOFING EXPERIENCE

5 STEPS FOR SLATE INSTALLATION

Snow guards are installed in rows in a staggered pattern along the eaves of a roof.

Typical layout is three rows staggered 2' on center. Each row should be 18" to 2' apart.

Placement and number of snow guards needed will vary depending on the roofing material, pitch, snow load conditions, ect.

Vermont Snow Guard Company offers a layout design service.

Our snow guards are **HEAVY DUTY**, durable, and built to stand up to extreme conditions. Properly installed, these guards will last for the entire life of your slate or tile roof.

Installation guides are available by visiting our website at:
